

Alliance Published Manuscripts

September 1, 2013 – August 31, 2014

Each year the Alliance Publications Committee, in collaboration with the Group Chair's Office, produces a booklet for the November meeting that contains the abstracts of original Alliance manuscripts published *in print* in the preceding 12 months.

We also highlight the three most significant manuscripts from that time period, based on nominations and reviews by our scientific leadership, as well evaluations by a separate review panel. Selection is based on the potential to change at least one of the following:

- Standard of care
- How clinical trials are designed and/or executed
- Our understanding of cancer biology.

This year's three most significant manuscripts are:

- [Epigenetics meets genetics in acute myeloid leukemia: clinical impact of a novel seven-gene score](#)
